SUMMARY

All-round software engineer who ships across the whole stack web front ends (React/Next.js), backends (NestJS, FastAPI, Laravel), real-time systems, and cross-platform games (Kotlin/libGDX, Tauri). Owns features from UI to API to database and deployment, with strong CS fundamentals. Seeking a software engineering role.

SKILLS

Languages: TypeScript, JavaScript, Python, Kotlin, PHP, Go, C++, SQL

Frontend: React, Next.js, Svelte, Vue, Tailwind CSS, Framer Motion

Backend: NestJS, Node.js, Spring Boot, FastAPI, Laravel, Socket.IO, REST APIs, WebSockets

Game / Systems: libGDX, Tauri, Unity, pharser, MVVM

Data & Infra: PostgreSQL, Redis, Prisma, TypeORM, Firebase, Docker, Docker Compose, nginx, Vercel, Git

Practices: Authentication (JWT / OAuth / OTP), Authorization Policies, Microservices, Clean Architecture

AI: PyTorch, TensorFlow, NLP, Speech-to-Text, Text-to-Speech, Computer Vision, LLMs

EXPERIENCE

Laboratory Assistant

Aug 2024 – Feb 2027

Bina Nusantara University (BINUS)

Jakarta, Indonesia

- Developed internal website applications
- Mentored students through real-world software projects, guiding architecture and implementation decisions.
- Authored case problems and delivered lab lecturing sessions on core CS topics.

PROJECTS

MonoClip | AI Desktop Video Editor

2026

github.com/Mr-coo/MonoClip

- Co-built a cross-platform desktop editor (Tauri 2 + React 19 + Rust + Python) with timeline editing, FFmpeg export, and local AI features.
- Wired a React UI to native Rust/Tauri commands and a Python FastAPI service; added email-OTP and Google/GitHub OAuth (JWT). PKM-KC 2026 team project.

Arithmancer | Web Game

2026

arithmancer.marcolinardi.site | github.com/Mr-coo/Arithmancer

- Built a web based game using React and pharser for frontend and spring boot for backend.
- Implemented realtime multiplayer game using websockets and deployment pipeline on personal vps.

PPTX Automation | Briefing Deck Generator

2026

Internal tool

- Built a Next.js + React tool that automates briefing-deck preparation, turning Excel data into PPTX/ZIP bundles with generated QR codes.
- Secured access with NextAuth + Firebase Admin and middleware-protected routes; persisted outputs to Vercel Blob with client-side encryption for sensitive data.

VleeFruit | ML Model + IoT

2025

github.com/Mr-coo/model-find-it

- Built an ML model for fruit quality inspection covering ripeness classification, defect detection, and size measurement.
- Connected the model to IoT devices over the MQTT protocol through a Go (Golang) service.

EDUCATION

B.Sc. Computer Science & Mathematics

2023 – 2027

Bina Nusantara University (BINUS)

Jakarta, Indonesia

- GPA 3.73. Relevant coursework: Machine Learning, Databases, Software Engineering, Web Development.

HONORS & AWARDS

- **MAPID See It** — Top Favorite (National, 2026): AI + geospatial web platform.
- **ICPC** — International Collegiate Programming Contest participant (International, 2025).
- **Alibaba Cloud** — National competition participant, full-stack developer (2025).
